2 English

2.1 Introduction

The question, whether being is influenced by language is a tricky one.
One might call this attitude reconstructivism.

2.2 The problem between epoche and fragmentation of thought

- Epoche is a kind of desintegration.

2.3 Some section

2.4 Section 1

Every factor f_{XY} contains a set S_{XY} and a function f_{XY} on the set of all composites S_{31} .

2.5 Section 2

A composite is a set of entities: $c_t = \{e_1, \dots, e_n\}$. The set of all composites is S_{31} . An entity e_t is either a composite or a particle. It has position $f_{15}(e_t)$, velocity $f_{16}(e_t)$ and acceleration $f_{17}(e_t)$. The integrity of a composite is e_t to the power of the delta of its volume: $f_{14}(c) = e^{\Delta v(c_t)}$. The volume of a composite is the Lebesgue measure of its convex hull:

$$v(c) = \lambda(\text{conv}(c_t)).$$

The convex hull of a composite is called its body:

$$f_{02}(c) = \text{conv}(c_t).$$

The centeredness of a composite s is defined as the integral of its volume:

State-based definitions:

$f_{93}(t)$ is the set of all particles that are in the

$$f_{93}(t) = \{c \in f_{31} | i(c(t)) < 1\} \quad (\text{collapse})$$

$$f_{13}(c) = \{s \mid i(c, s) > 0\} \quad (\text{fragmentation})$$

”The set of states of c where $i(c) > 1$ ”

A composite with an integrity of 1 behaves like a particle:

$$i(c) = 1.$$

$$f_{02}(c) = \{s \mid i(c, s) = 0\} \quad (\text{body as equilibrium states})$$

2.6 Example

The most radical form of authenticity is to act with integrity regarding the true self even if it means death.

$$\text{action} := a \in 48$$

$$\text{self} := s \in 35$$

$$r := 31(a, s)$$
